voltage corresponding to fluctuations of the output voltage of the converter circuit 11. That is, the fluctuations of the output voltage of the converter circuit 11 become larger, change of the output voltage of the second differentiating circuit 14 becomes greater.--.

IN THE CLAIMS:

Amend claim 1 as follows:

A₃

--1. (amended) A DC stabilized power supply for use in converting an inputted DC power supply voltage into a predetermined DC voltage, comprising:

a DC-DC voltage converter circuit for converting an inputted DC power supply voltage into a predetermined DC voltage supplied on an output of the converter circuit;

a first differentiating circuit for differentiating variations in an output voltage of said converter circuit; and

a current absorbing circuit driven by an output voltage of said first differentiating circuit,

an output of the current absorbing circuit being connected to the output of the DC-DC voltage converter circuit.--

Amend claim 4 as follows:

A₄

--4. (amended) A DC stabilized power supply for use in converting an inputted DC power supply voltage into a predetermined DC voltage, comprising:

a DC-DC voltage converter circuit for converting an inputted DC power supply voltage into a predetermined DC voltage

supplied on an output of the converter circuit;

cont
Q4
a second differentiating circuit for differentiating variations in an output voltage of said converter circuit; and

a current injecting circuit driven by an output voltage of said second differentiating circuit,

an output of the current injecting circuit being connected to the output of the DC-DC voltage converter circuit.--

Amend claim 7 as follows:

Q5
--7. (amended) A DC stabilized power supply for use in converting an inputted DC power supply voltage into a predetermined DC voltage, comprising:

a DC-DC voltage converter circuit for converting an inputted DC power supply voltage into a predetermined DC voltage supplied on an output of the converter circuit;

a first differentiating circuit for differentiating variations in an output voltage of said converter circuit;

a current absorbing circuit driven by an output voltage of said first differentiating circuit;

a second differentiating circuit for differentiating variations in the output voltage of said converter circuit; and

an current injecting circuit driven by an output voltage of said second differentiating circuit,

an output of the current injecting circuit being connected to the output of the DC-DC voltage converter circuit, and
